

TRACY

SHOPFLOOR CONTROL & MANUFACTURING EXECUTION SYSTEM

Free configuration & Flexibility

Paperless work & Automation

Seamless integration with ERP systems

From reactive to proactive management

<https://tracy.codeyellow.nl>

What is TRACY?

TRACY is a **Shop Floor Control (SFC) / Manufacturing Execution (MES) system**. It digitizes dynamic business processes, like in a production environment.

TRACY provides a web application that enables processes to be planned, executed and immediately improved more effectively.

Does TRACY fit my organization?

Many companies in the manufacturing industry are well automated. It often turns out that the challenges in managing the shop floor / factory are greater than expected.

The use of smart systems is essential to ensure an optimal use of resources to meet goals and expectations.

TRACY realizes real-time insights into all processes, it facilitates faster growth of the company and eliminates unnecessary production costs.

How will my organisation benefit from TRACY?

1 *User friendly configuration & visualization of processes*

TRACY is a flexible and future-proof system that will guide your organisation through a digital transformation. TRACY offers maximum flexibility and prevents unnecessary consultation. You decide how the processes, instructions and workplaces will look and how they are linked to each other. You can also modify these whenever they change.

2 *Paperless working & Automation*

Paper order files and planning become digital. Standard operating instructions become digital. No unnecessary paper administration is needed, just efficient and digital recording of information.

Connect your scanners, printers and other tooling or machines to the application.

Interface with your factory workers on the shop floor through workstations and touch panels.

3 *Seamless integration with other systems such as ERP*

TRACY easily transfers and retrieves the required information from and to any system. For example item data, parts lists and orders.

Finalization of production orders, material declarations and other feedback, is immediately forwarded to underlying systems during the process.

4 *From reactive to proactive management*

Get grip, traceability and real-time insight into every planning and step in your process through serial numbering and scanning.

With real-time process data you can act on time in case of errors and deviations. Tracy links data from production processes and creates a very clear overview with insights. You can refer to and analyze all process data whenever you like.

Who is Code Yellow?

Since its foundation in 2012, Code Yellow B.V. is on a mission to create innovative business applications as an independent software company. Together with our international customers, we develop business applications that make complex processes simple, transparent and manageable.

Many years of experience and expertise have been employed to build our unique framework: the INCENOVA APP Engine. A powerful software foundation, which can be used in the development of your personalized software solutions.

When to choose TRACY?

If you want:

Clear insights and grip on your shop floor processes?

A visual, intuitive environment with real-time insight and traceability?

Eliminate unnecessary consultation between departments?

A seamless collaboration between your own systems and TRACY?

Please contact us, we will visit you online or offline and to inventory the possibilities.
